

CPI-Link

CPI carries a large inventory of transition piece and combustion liner subcomponents to support the manufacturing process. As such, it is a natural fit to support gas turbine repair shops with their detail requirements. To facilitate procurement decisions and clarify design specifications, CPI created an online portal to share our knowledge and expertise with our customer base. CPI-Link is our customers' link to combustion part knowledge.

- Password protected portal ensures that proprietary information is only shared with our customers.
- Extensive online catalogue of parts with over 150 components listed.
- ISP (Industry Standard Part) document outlines pertinent information, including visual reference, critical dimensions, materials, and configuration options.
- RFQ function allows our customers to easily build a request as they browse, and submit directly to CPI's Sales.
- Each customer account maintains a record of all previous requests for quick reference.
